There's a certain irony to our present-day farming system being called conventional while the ancient farming methods that fed civilization for

millennia are known today as "organic

HAT DOES IT MEAN TO BE GREEN? Does it mean adding foud coloring to your beer to celebrate St. Patrick's Day? Does it mean, perhaps, being too young? Or too hoppy! If you've been conscious the last few years, you already know the answer to all of those is an emphatic "no." Being and thinking "green" is an emerging way to approach your place in the world so that you leave the planet as you found it, doing as little damage as possible along the way There's an organic movement afoot, but is it enough to wear Birkenstocks in order to walk the walk?

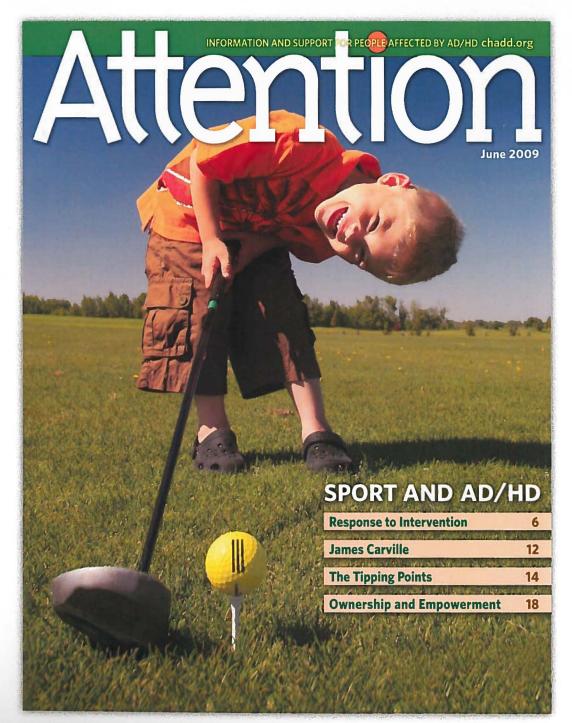

For many brewers, it's much more than that, it also means figuring out ways to make beers that reduce the brewing process's curbon footprint as much as they can. For others, it means all that, plus making organic beez. using ingredients that themselves do as lettle barm as possible to the ground they grow in, using methods that reduce waste, encourage diversity in exchew pittentially harmful chemicals. One thing you can say about almost all brewers, they really care about the impact they're having on the environment and do more voluntarily than perhaps any other industry. In many cases, it's also much for their bottom line, but by and large they do it because it's the right thing to do, often regardless of the cost. The Biekenstocks just make their feet feel better

uch attention has been focused recently on enterprise risk management (FRM). not just in the insurance industry but in other industries as well. Across all in dustries, risk managers continue to seek better ways to identify, measure, and manage their risks. Many companies look to the leaders in their industries for insights into risk management techniques. This is certainly a valuable source of information and ensures that a company is at least keeping up with its peers. However, risk managers have been less likely to look outside their industries for leading-edge techniques. This is unfortunate because interesting and innovative approaches can be developed by adopting-and, in some cases, adapting-the tools and techniques used in other industries.

in this article, we consider those industries, with management practices insurance, insuling, and manufacturing, and manufacturing, and manufacturing and provider in the provider in the properties of the provider in the minigation of operational provider provider in the minigation of operational provider in the provider in the minigation of operational provider in the provider in the minigation of operational provider in the provider in the minigation of operational provider in the provider in the minigation of operational provider in the provider in the minigation of operational provider in the provider in the management took, a company on a feet that the provider in the management took as company in the provider in the provi

At an AHIP/Kalser Foundation Health Plan forum highlighting the private sector's role in Europe, representatives from the Dutch and Swiss systems outlined what makes their models work and the elements that contribute to high consumer satisfaction.

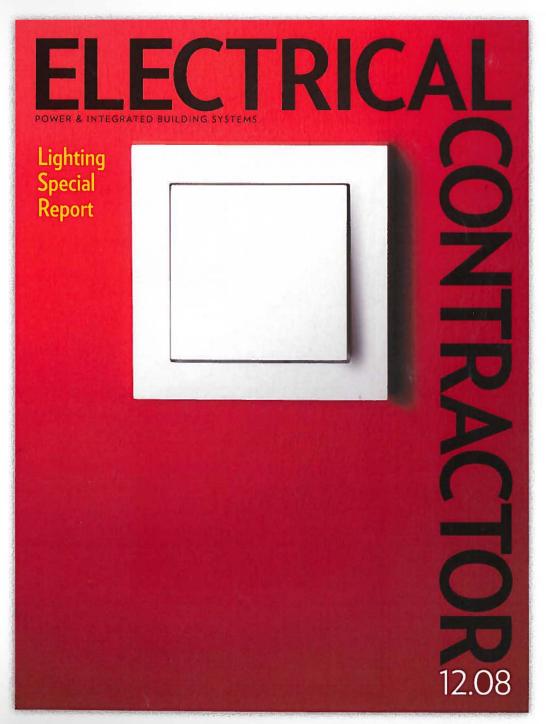

BY AILEEN KANTOR

HE NETHERLANDS AND SWITZERLAND ARE TWO COUNTRIES that have successfully leveraged the private sector to achieve universal coverage, something that has, until recently, gone virtually unnoticed in the United States. Over the years, U.S. policy experts and consumers have studied other countries, focusing on Canada and England-two largely government run systems—to try to get a better understanding of their approaches to universal coverage. Yet, with these systems experiencing key challenges and with their applicability to the United States in question, health policy experts and presidential hopefuls are now taking a closer look at the experiences of other countries that have developed alternative models of reaching universal coverage.

Switzerland's and The Netherlands' achievements were explored at a forum in Washington, D.C., last October sponsored by America's Health Insurance Plans and Kaiser Permanente, "European Systems of Universal Health Care: A Discussion of the Role of the Private Sector in Europe." The forum gave at tendees a look at countries that offer universal health coverage through systems in which the private sector plays a central role in making care better and more affordable. As the U.S. presidential election approaches and leaders struggle with the Issue of covering 47 million uninsured individuals, the Dutch and Swiss systems are worth studying.

Why Professional Interpreters Are Critical in Asylum Interviews

OR AN ASYLUM-SEEKER, THE DIFFERENCE BETWEEN FREEDOM AND PERSECUTION or even life and death-can depend on how to answer questions he or she does not understand To apply for anylum in the United States, an applicant must appear before an asylum officer (AO) to complete an asylum interview and as part of ensuring that the applicant is being trigible about his or her claims (see 8 CFR \$208.9(g)). As everything about the asylum application proresidences represent one of the most significant factors at the outcome of the interview is the language harner between the applicant and the AO conducting the interview Asylum interviews are considered to he "nonachersanal," so the government does not provide professional interpreters (see 8 CFR \$240.67(b) (1): instead, every applicant must find and bring an interpreter (see 8 CFR \$8208 9(g), 240 67(b)(3)). A successful asylum interview is completely dependent on the applicant's shility to answer the AO's questions and to effectively communicate past and feared persecution. Thus, if the applicant does not have an unterpreter who can clearly and accurately communicate his or her every word, the case may be referred in the immigration court—effectively placing the applicage in removal proceedings.

Over placed in retireral proceedings, it is very difficult for Lack of interpretors Undermines Freedom their planed in notional proceedings, it is very deficial by a simple signature of the process could read in the relationship of the signature of the general original scale point of the process of the

Land Development

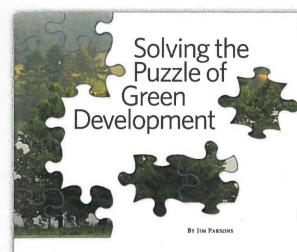

Published by the National Association of Home Builders (NAHB)

Land Development was a startup magazine in 1988 that Bono designed and pasted up (yup, pasted up) and Tom typeset (yup again, typeset). We have redesigned it several times since then and continue to do the ongoing design and production.

56 pages, quarterly.

PREMIER ISSUE JANUARY 1988

REEN DEVELOPMENT MAY BE THE most influential trend in the land development industry since the suburbanization boom of the 1930s. It may also prove to be the least understood.

To be sure, there is no shortage of guidance available

to developers on the matter. NAI III has hosted its Green Building Conference for 10 years now, and the volume of project case studies grows almost monthly these days. The industry professionals who have long used some of the practices now associated with the "green movement" are pleased to see their colleagues catching on

and catching up.
"The time we're in is fascinating," says Bruce Bon-che, President and CEO of BME Associates, a Fairport,

New York-based engineering, planning, and landscape architecture firm. "Green encourages people to think to Rost Tyre, development project manager for Rocket creatively, rather than timply following what's always.

Properties, Little Rock, Atkansas. But when they go into been done under the local crule. And most people like a project and see features such as a more park-like act thinking outside the box."

Still, questions remain among many developers and What is certain at this publishers—starting with the basics of how to define what is no longer a passing fad. green development is and proceeding on to how to ac-

to interpret that, as the degree to which they are h

Butters of property aren't about our either, according ting, they like it."

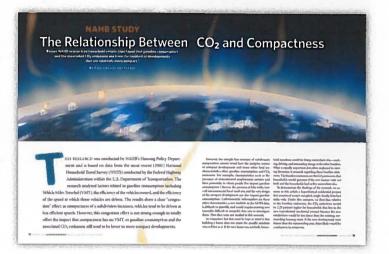

What is certain at this point is that execu development

The question of "whether the market wants it or not has been asked and answered," says leff Kingsbury, complete it.

MAKING WATER SUSTAINABILITY

IN 2001 when into Michall, president of Rhein Medall Communities, proposed building ing a low-density, master-planned gail course community and 1,600 acres of former timber land, he promised the project would be a national result for environmentally sensitive land development. The project was to be The Pationdes on Lake Wylie in Charlotte, North Carolina, and at the time, the neighbors and community were skeptical.

However, seven years later, after investing \$1 trillion in a land and water quality plan for the project and imple menting that plan with care and precision. The Palisades has wen numerous national awards and emerged as a showcase for land development practices that protect water resources. Phase I of The Palitades

which includes the notif course and 300 of 2,500 lateraches here consulated, and much has been Phase II, which will be 300 lots in 13 neigh-

borhoods. In addition, all of the community's amerities—including a large tennis complex, to a private school), an equestrian center (with hern, galloying trails and pastures), and

Despite potential impact on the environ ment from construction, recent cove core samples of Lake Wylie have demonstrated that, through the developer's difference, the weet looking from The Pelisades into the lake is actually cleaner then water use

At the same time, The Policades has claimed a lead in market share of luxuey brune sales in southwest Mechbookson Cons ty-a major growth area in the Charlotte real estate market. According to Medall, acconsolishing the project's charl made water down to a good initial level and water quality plan based on best practices that is the followed through at all levels.
